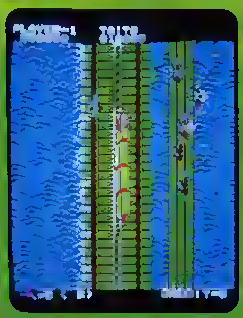
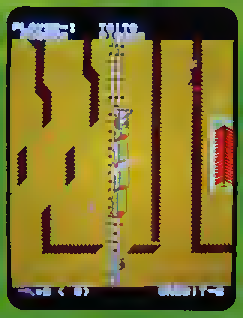
WILD WESTERN





Journey back 150 years in time and relive the history of the wild west in Taito's colorful WILD WESTERN. Action and adventure await you as you mount your firey steed and gallop across the desert in hot pursuit of a gang of bandits. Feel like a true Western Hero after all have been shot down and the locomotive passes through safely.

PLAY FEATURES

The horse's speed and direction are controlled by the 8-way joystick.

Directional gunfire is controlled by the 8-way rotary switch and by pushing the same switch, the player fires at the runaway bandits.

Bandit's gunfire, running into cacti, rocks, or the train is fatal to the player.

The game ends when the player has lost all of his sheriffs or when 3 bandits have hopped aboard the train.

When a bandit has hopped aboard the train, the player must also climb aboard in order to shoot him.

Getting aboard the train requires skill and timing as he must run parallel with the train at a safe distance and push the jump button to get aboard. The same is true when the player returns to his horse; he must wait for his horse to run alongside the train and time his jump in order to remount his horse.

Riding aboard the train too long is also dangerous because the player must watch for the outstretched waterpipes when passing by watertanks. The player must push the button to duck under the waterpipes or be knocked from the train.

The player gets a chance to sharpen his aim in the bonus frame by hitting the coin tossed into the air by his horse. Double the bonus for a hit, or the horse laughs when missed.

An additional sheriff is added for scoring 30,000 points (adjustable).

WILD WESTERN IS AVAILABLE IN UPRIGHT AND TABLE MODELS.
